

## COMPOSITIONS AND METHODS FOR ENHANCING DRUG DELIVERY ACROSS AND INTO OCULAR TISSUES

5

### ABSTRACT OF THE DISCLOSURE

This invention provides compositions and methods for enhancing delivery of drugs and other agents across epithelial tissues, including into and across ocular tissues and the like. The compositions and methods are also useful for delivery across endothelial  
10 tissues, including the blood brain barrier. The compositions and methods employ a delivery enhancing transporter that has sufficient guanidino or amidino sidechain moieties to enhance delivery of a compound conjugated to the reagent across one or more layers of the tissue, compared to the non-conjugated compound. The delivery-enhancing polymers include, for  
15 example, poly-arginine molecules that are preferably between about 6 and 25 residues in length.
